

How to run it on your Windows laptop

Step 1 — Install Python (free, once ever)

Go to this direct link and download:

<https://www.python.org/ftp/python/3.12.4/python-3.12.4-amd64.exe>

Run it. On the **very first screen**, at the bottom, tick the box that says **"Add Python to PATH"** — this is the only thing that matters. Then click **Install Now**.

Step 2 — Extract the ZIP

Unzip `VvynasVane_Windows.zip` anywhere — Desktop is fine.

Step 3 — Double-click `RUN.bat`

That's it. On the very first run it will install 2 small packages automatically (takes ~30 seconds), then **Vvynas Vane opens**.

Every time after that, just double-click **RUN.bat** — it opens in about 3 seconds.

If Windows blocks `RUN.bat`

Right-click it → **Run as administrator** → or click **"More info"** → **"Run anyway"** if you see a blue "Windows protected your PC" popup.

Alternative: `RUN_POWERSHELL.ps1`

Right-click → **Run with PowerShell** — same result, sometimes more reliable on newer Windows versions.

What this version uses instead of npm/Node

It runs on **Python + pywebview** — Python opens a native Windows window, loads the HTML/CSS/JS UI inside it, and bridges file system access (scanning folders, reading metadata, saving playlists) through a Python backend. Same full UI, same 11 animated themes, same EQ, video player, and all features — just no npm required.

New Stop button (■) sits between Prev and Play. It pauses and resets the track to 0:00, flashes red briefly on click, and shows a toast. Keyboard shortcut: `S`.

Shuffle — the button now shows a small **SHUF** / **ON** label beneath the icon so you can always see the state at a glance, not just rely on the colour.

Repeat — cycles through three modes with a clear label under the icon:

- **OFF** — plays through the queue once and stops
- **ALL** — loops the whole queue continuously
- **ONE** — loops the current track forever (the icon also shows a tiny "1")

Each mode change fires a toast notification so you know exactly what got toggled. All states persist across sessions via settings.

Keyboard shortcuts summary:

Key	Action
Space	Play / Pause
S	Stop (reset to 0:00)
Ctrl+S	Toggle Shuffle
Ctrl+← /→	Previous / Next
